

Tool 19: Monitoring Impact on Practice and Neonatal Outcomes

Each country will need to decide how this information will be collected and by whom; how this information will be incorporated into the national HMIS; and how it will be disseminated to national, regional, district and facility managers to guide decision making.

Key indicators:

- I. Condition at birth – percent of infants who do not cry at birth
- II. Resuscitation – percent of infants not crying at birth who are resuscitated
- III. Neonatal outcome – percent of infants (live births+not crying or breathing well) alive at 24 hours

Additional indicators may be collected as specified by the individual health system.

Deaths in the delivery setting – percent of infants (live births+not crying or breathing well) who die in the immediate delivery period.

Deaths in the first 7 days – early neonatal mortality

Deaths in the first 28 days – neonatal mortality
